# Tools

# The Method

Webpages

316 jobs scraped from  
last 2 months in Barcelona

Web Scraping

- HTML
- BeautifulSoup (python)
- Selenium (python)

Structured data

- Data Cleaning
  - Python
  - NLTK
- Extracted Data: Title, Company, Location, Modality & Description

# Global Analysis

# Global Analysis (I)

Global Category %

Global x Modality

Global x Seniority

# Global Analysis (II) - Tools

# Global Analysis (III) - Hard Skills & Soft Skills (Top 5)

## Hard Skills (Total)

## Soft Skills (Total)

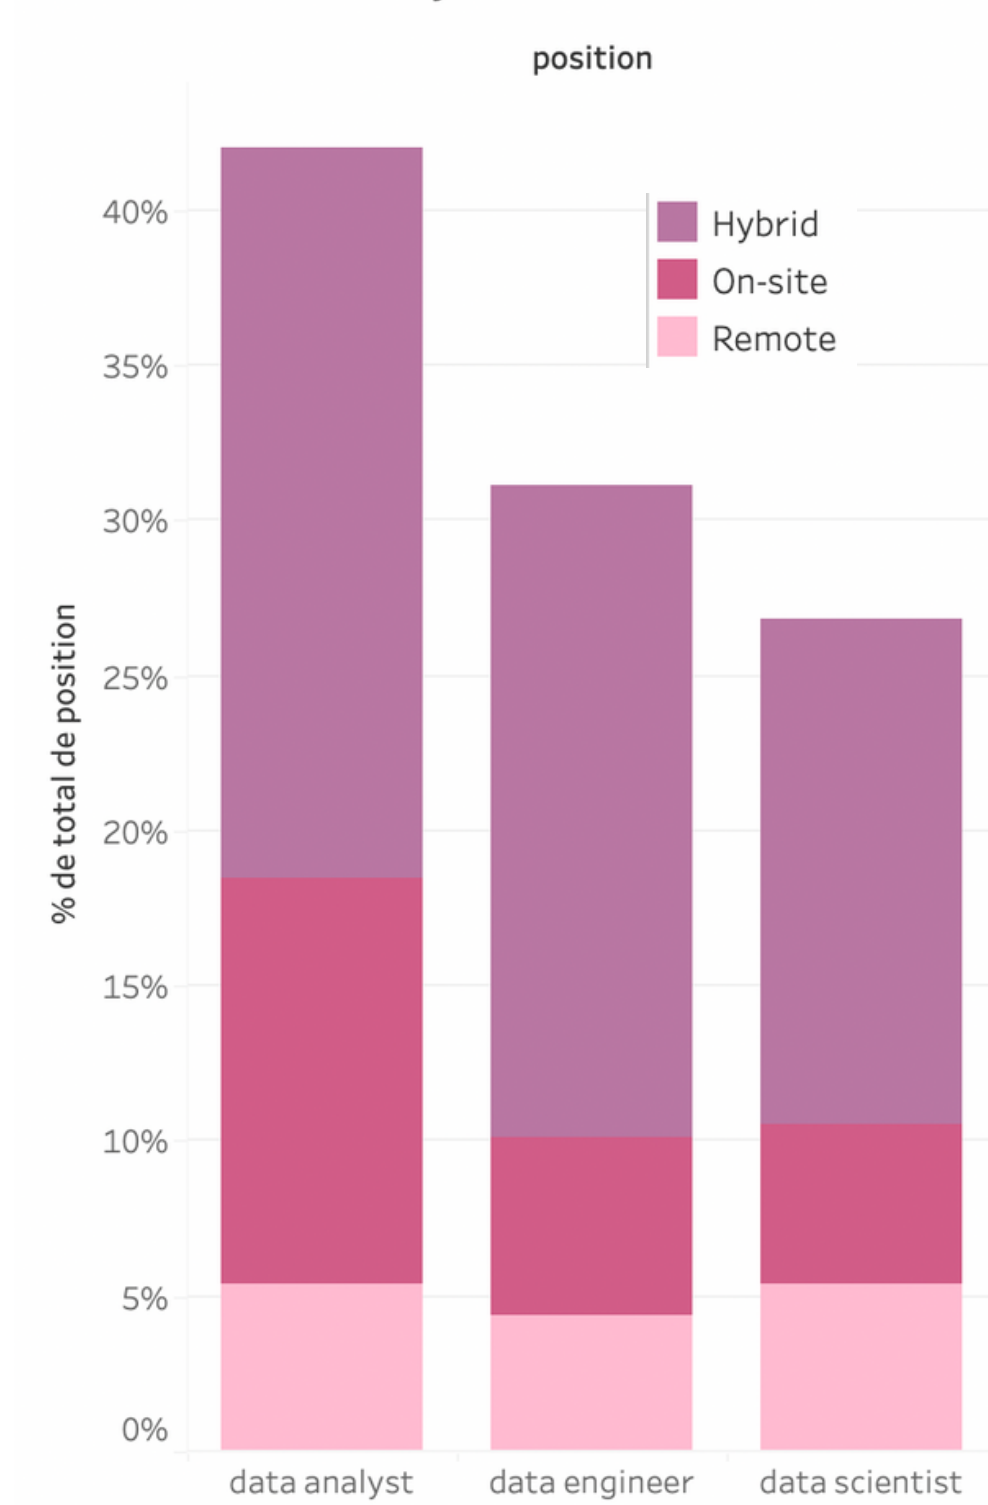

# **Analysis between Categories**

# Analysis between Categories (I)

Global x Seniority

Seniority x Category

## Insights:

- More On-site positions on DA jobs
- A bit more junior positions on DA jobs

# Analysis between Categories (II) - Programming Tools

Programing Tools x Category

## Insights:.

- DA and Engineer ask more SQL than python
- Scientist positions demand more python & r than SQL.
- DA and Scientist jobs - r and python very close
- Engineer jobs - Python > r

# Analysis between Categories (III) - Hard Skills

- Insights:**
- IA appears in all three categories.
  - DA jobs - hard skills related to visualization
  - ML - only Scientist jobs
  - Big Data - Scientist and Engineer jobs
  - ETL - Only Engineer jobs and top 1 (all process)

# Analysis between Categories (III) - Soft Skills

Soft Skills x Data Analyst

Soft Skills x Scientist

- Insights:**
- Management, Communication (always in the podium) and Proactive skills are in all three categories
  - Leadership appears in DA and Engineer jobs

Soft Skills x Engineer

# Recap...If you want to become a Data Analyst

- Although the **hybrid format predominates**. It is the category with the **most on-site positions**. Maybe one of the **reasons** is that it is the category with **more junior positions**
- **SQL** is by far the **most demanded** programming tool. It is **followed**, of course, by **Python and r** (very close to each other)
- **Power BI and Tableau** are requested more or less equally
- **Hard skills** most in demand for Data Analyst jobs are closely related to **visualization (Dashboard & Reporting)**
- Most popular **Soft Skills** for a Data Analyst are Management, Communication, Leadership, Decision Making and Proactivity.
  - *This is why it is so important that if in our background we have been in roles where we have enhanced these skills, we must make them shine in the selection process!!!!*

# ***\*Bonus Track: Top companies in need of talent***

## Bonus Track: Top Companies

# Next Steps

- Use this project for other fields and locations.
- See differences over time
- Try to introduce the salary feature, as it could provide incredible insights.
- Use SQL to be able to have a model.

# THANK YOU!
